

# KOMOTO DVR for Point of Sale

## Integration of CCTV video and values on cash register machine

### Point of Sale DVR Integration

You may now integrate your POS system with your digital surveillance system. It is possible to:

- Superimpose transaction data on the recording image
- Record both live video and POS transaction data
- Provide evidence for fraud or unintended operational error by recorded video and transaction log
- Comparing transaction data to video for identifying fraud or unintended operations

1. Video out from the camera goes to video in on the Komoto Text Inserter. This camera typically watches the general area around the cash register/POS station, including the register, counter, employee and customer.
2. Some registers utilize an RS-232 printer tap, while others with no RS-232 ability must be fitted with an additional interface module which converts the printer data to RS-232 for the Komoto inserter.
3. Video out from Komoto inserter goes into the DVR.
4. Video is displayed on the DVR monitor.
5. The EX option provides 2 hard alarm outputs to trigger alarming DVRs for Exception Reporting and Recording.
